

Windows Optimisation

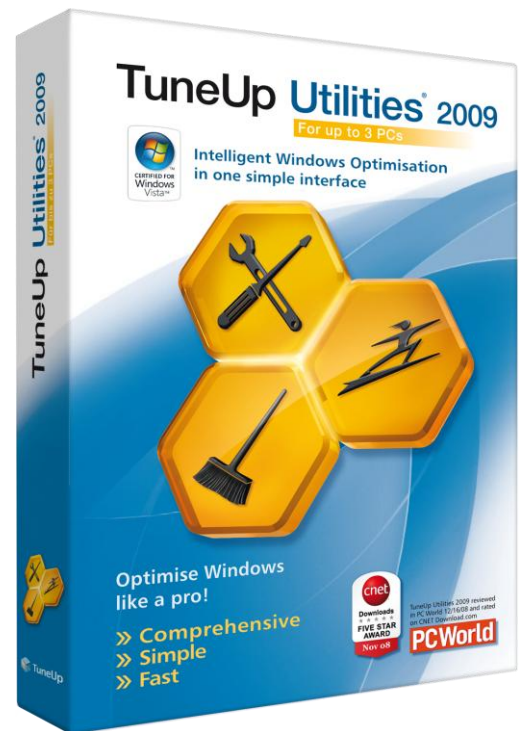

TuneUp Utilities 2009 certified for Windows Vista

Reliable optimisation of Windows Vista PCs now confirmed

TuneUp Utilities 2009 has been certified for Windows Vista by Microsoft. This guarantees that Windows-Vista Users can optimally repair, accelerate, clean and customize their PC with the latest version of TuneUp Utilities 2009.

The latest version of TuneUp Utilities 2009 was officially launched in November 2008 and has since been tested on both Windows XP and Vista by renowned international PC publications and Windows experts. Numerous awards and positive test reports prove the software is suitable to use with both operating systems. As with the previous version, the additional certification awarded by Microsoft confirms the compatibility of TuneUp Utilities 2009 with Windows Vista. To receive the "Certified for Windows Vista" logo products must pass all tests in the core areas of reliability, security, compatibility with Windows Vista and future operating systems as well as installation and deinstallation.

Windows Tuning – intelligent and customised for Vista and XP

TuneUp Utilities 2009 analyses the configuration of a user's PC and, based on the selections made by the user, determines the best steps for optimising the PC. The user is always in the driver seat since the program explains all the tasks it performs and never secretly accesses the system. The program supports Windows XP and Windows Vista (32 or 64 bit) by automatically adapting to the PC's operating system. This offers Windows XP users the safety of continued use without purchasing an upgrade when migrating to Windows Vista. Thanks to the certification for Vista, users are guaranteed optimum maintenance of their PC when upgrading their operating system.

"There are 'black sheep' even among Windows optimisation tools on the market, that is, unprofessional tools, that cause more harm through overeager tasks rather than finding a solution to the original problem. We work closely with Microsoft to provide our customers with software with which they can optimise their Windows operating system safely and selectively at any time. We are pleased, that TuneUp Utilities has once again successfully passed all the requirements tested by Microsoft." explains Tibor Schiemann, President & Managing Partner of TuneUp.

Price and availability

TuneUp Utilities 2009 can be downloaded at <http://www.tuneup-software.co.uk/download>. It is available via the retail channel in the United Kingdom for a recommended retail price of £29.99 and can be used for up to 3 PCs. Existing users of TuneUp can upgrade their software for £17.99. Users wishing to first try the product can also download a free 30-day trial version from the TuneUp website.

About TuneUp

TuneUp Software GmbH, based in Darmstadt, makes it possible for Windows users to fine-tune their PCs for optimum performance. PCs that are maintained using TuneUp Utilities are less cluttered and are proven to work faster and be more stable.

The success story began eleven years ago when TuneUp founders Tibor Schiemann and Christoph Laumann developed the first complete package for the optimisation of Windows PCs. The program was called "TuneUp 97 – the intelligent tuning tool". The TuneUp founders considered "intelligent tuning" to be the effective optimisation of PCs that takes care of as many of the necessary steps as possible for the user.

Since 2003, TuneUp has been expanding internationally: TuneUp Utilities is currently used by 10 million people worldwide and is now available in English, German, French, Dutch, Spanish, Italian and Polish. End users can find TuneUp Utilities directly on the company's home page (www.tuneup-software.co.uk). Wholesalers and retailers in the UK can commission the professional services of PX Software which exclusively represents TuneUp in the UK market.
